Micro-perforated bread bags

Micro-perforated bags are polypropylene bags (PP bags) that are mainly used for packaging bread rolls and baguettes. Micro-perforated bags are designed to guarantee the quality of these products for as long as possible. Unlike regular plastic bags and packaging, micro-perforated bags have the unique property of being oxygen permeable, albeit in small quantities. Like all standard plastic bags, micro-perforated bags are available in various types, sizes, and designs, from small to large.

Microperforated vest type bags

Special polypropylene bags for packaging items such as bread rolls. Easy to close thanks to the “shirt bag” design. Material: CPP 30my
