

Micro-perforated bread bags

Micro-perforated bread bags are polypropylene bags (PP bags) that are mainly used for packing crusty rolls and French bread. Micro-perforated bags are designed to guarantee the quality of these products as long as possible. Because, contrary to regular plastic bags and packaging, micro-perforated bags have the unique property of being - to a degree - permeable to oxygen. Micro-perforated bags are, like all standard plastic bags, available in various types, sizes and versions. From small to large.

Microperforated bags including drawstring

Special polypropylene bags for packing, for example, crusty rolls. Equipped with a handy cord to close the bags. These bags can also be produced to size, with or without a cord. Material: CPP 30my

Article number	Description	Packed per
